- To help you interpret your private drinking water laboratory results, please visit the Missouri Department of Health and Senior Services website at <https://mohealth.uservice.com/knowledgebase/articles/1875745-what-are-drinking-water-standards>.

On this page, you will find a list of National Primary Drinking Water Regulations (NPDWRs) and their Maximum Contaminant Levels (MCLs) as well as National Secondary Drinking Water Regulations (NSDWRs) and their secondary standards. MCLs are levels at which public drinking water suppliers are required to make modifications in their water treatment processes to reduce the respective chemical level in order to protect the health of the people who use that water supply. Secondary standards are non-enforceable guidelines for contaminants in drinking water that may cause cosmetic or aesthetic effects. These drinking water standards were developed to regulate public drinking water. Because private drinking water is not regulated, the Missouri Department of Health and Senior Services (DHSS) currently follow these standards when sampling private drinking water and to make health based recommendations.

If your lab report shows a chemical that has been detected above any of these EPA levels, you may want to speak to a water specialist about having a filtration device installed at your home to reduce levels of contaminants. For more information regarding your private drinking water laboratory results, please contact your Local Public Health Agency. For contact information, please visit our website at <http://health.mo.gov/living/lpha/lphas.php>.

If your lab report shows a chemical that has been detected above any of these EPA levels, you may want to speak to a water specialist about having a filtration device installed at your home to reduce levels of contaminants. For more information regarding your private drinking water laboratory results, please contact your Local Public Health Agency. For contact information, please visit our website at <http://health.mo.gov/living/lpha/lphas.php>.

- To help you interpret your private drinking water laboratory results, please visit the Missouri Department of Health and Senior Services website at <https://mohealth.uservice.com/knowledgebase/articles/1875745-what-are-drinking-water-standards>.

On this page, you will find a list of National Primary Drinking Water Regulations (NPDWRs) and their Maximum Contaminant Levels (MCLs) as well as National Secondary Drinking Water Regulations (NSDWRs) and their secondary standards. MCLs are levels at which public drinking water suppliers are required to make modifications in their water treatment processes to reduce the respective chemical level in order to protect the health of the people who use that water supply. Secondary standards are non-enforceable guidelines for contaminants in drinking water that may cause cosmetic or aesthetic effects. These drinking water standards were developed to regulate public drinking water. Because private drinking water is not regulated, the Missouri Department of Health and Senior Services (DHSS) currently follow these standards when sampling private drinking water and to make health based recommendations.

If your lab report shows a chemical that has been detected above any of these EPA levels, you may want to speak to a water specialist about having a filtration device installed at your home to reduce levels of contaminants. For more information regarding your private drinking water laboratory results, please contact your Local Public Health Agency. For contact information, please visit our website at <http://health.mo.gov/living/lpha/lphas.php>.
